Coffee Enjoyment

AVANZA®

SMALL FULLY AUTOMATIC COFFEE MACHINE - BIG COFFEE ENJOYMENT!

The Melitta® Avanza® is one of the smallest fully automatic coffee machines on the market, slotting in perfectly to every kitchen. While it is small in size, it's big on features and functions. The design of the Melitta® Avanza® does not only live up to its name but goes one step further: The mystic titan surface imparts an eye catching metallic look to the machine. The new premium drip tray made of stainless steel with an anti-scratch plastic insert completes the design perfectly.

The newly developed control panel with its extra-large buttons looks great and offers excellent functionality. They also allow direct access to café crème or espresso. Furthermore, care and maintenance of the device is easy thanks to the sophisticated service menu.

Despite its compact design, the Melitta® Avanza® is equipped with an extra-large water tank (1.5 l) as well as an extra-large bean container (250 g). For plenty of coffee enjoyment within the smallest space! The new Melitta® Easy Cappuccinatore brings variety into play. With the Easy Cappuccinatore it is easy to prepare a latte macchiato or cappuccino in only two steps: frothing milk, pouring coffee – done.

The inner values are also right: The grinder does not only grind reliably but also super quietly. And since Melitta® is well known for making coffee an enjoyment: The new pump control optimizes the contact time between water and ground coffee. This allows the coffee aroma to develop even better.

The Melitta® Avanza® is the ideal coffee machine for those who are looking for a reliable partner throughout the day, who takes up little space but stands out with its visual appearance.

HIGHLIGHTS

Easy Cappuccinatore

With the help of the integrated milk system, any coffee speciality can be prepared in two easy steps: Froth the milk with the Easy Cappuccinatore, pour your coffee, mix them together – done.

Whisperquiet Grinder

You can drink freshly ground coffee while everyone else sleeps. Your fully automatic coffee machine has a super-quiet steel cone grinder that grinds the coffee beans quickly and quietly.

XL Water Tank and Bean Container

The Avanza® offers a XL water tank of 1,5 l and a XL bean container of 250 g.

A slim miracle

The Avanza® is really slim – only 20 cm wide! We don't need more space than that for the high-quality Melitta® technology.

Smart support

Download the Melitta® Companion® app to your smartphone. There you will find practical information and tutorials. Fast service is of course also available with the app.

UNIQUE COFFEE ENJOYMENT

Aromatic Coffee Enjoyment

The new pump control guarantees an ideal contact time between coffee and water. You can now enjoy the two classics Espresso and Café Crème with even better developed flavours.

Aroma-Extraction-System (A.E.S.)

More flavour with pre-brewing: The freshly ground coffee is moistened with water before the actual brewing process. As a result, the flavours dissolve better and where do they end up? In your coffee, of course.

Adjustable coffee strength

The intensity of the coffee strength is easy to adjust from mild to medium to strong. You can adjust the amount of coffee, too, of course. Variable - exactly the way you like it.

Five grinder settings

Coffee just the way connoisseurs like it - freshly ground from whole beans.

INTUITIVE TO USE

Double Cup Mode

It's better together - the Double Cup Mode allows you to make two cups of espresso or café crème at the same time. It is of course also suitable for those who drink a lot of coffee.

Height adjustable coffee outlet

The outlet is height-adjustable up to 135 mm so that you can also use glasses or extra large mugs.

LED symbol display

It goes without saying - the LED display with red symbols makes using the fully automatic coffee machine simple and convenient.

Anti Scratch

The newly designed drip tray has a stainless steel drip plate with an integrated high-quality anti-scratch plastic insert.

EASY TO CLEAN AND CARE FOR

Removable brewing unit

The complete brewing unit is easy to remove and is simple to clean. The interior of the machine is accessible and can be cleaned without any problems.

Automatic cleaning and descaling programme

Communication is everything. Your fully automatic coffee machine informs you on the display when it needs to be cleaned or descaled.

Water filter compatibility

To make your coffee taste even better use a Melitta® Pro Aqua water filter. Another advantage is that when you do, then your machine only needs to be descaled once a year*. The filter prevents limescale deposits in the water system for as long as possible.

Service button

Many fully automatic machines with a symbol display can be complicated to use. We have found a solution - the service button! It gives you quick access to the cleaning and descaling programme, the brewing temperature and water hardness settings and the auto-off feature. Changing the filter is also piece of cake.

*Based on a 120 ml cup 6 cups a day and changing the filter 6 times according to the appliance specifications.
